Operator Screen

The large, bright operator screen clearly sets the SPS-300 series apart from traditional ECRs. Just glance at the screen to verify or fill an order. If necessary, you can page up or down through larger transactions. Easy-to-follow messages guide your operator with minimal training.

On screen programming simplifies programming of new PLU items and price changes. Managers can access sales, inventory and financial information and view it directly on the screen.

Keyboard

The programmable keyboard can be customized with PLU keys for open price or preset entries and function keys for discounts, payments and corrections.

- Models with the 150 key position flat keyboard support 100 or more PLU locations.
- The raised keyboard model features 21 standard PLU locations, expandable to 63 or more PLU locations.

Thermal Printer

Keep pace with fast, quiet, thermal printing. Drop-in loading simplifies paper changing and virtually eliminates paper jamming.

Electronic Journal

The SPS-300 stores your detailed sales journal in memory for printing at the end of the day. Electronic journal can be printed in its entirety or select from ten different print option selections.

Secure SD Port

Save/load your program, load receipt logos/images or update firmware by SD card.

Communications Ready

Two RS-232C ports and inter-register communications (IRC) are available on every SPS-300 series ECR. Using IRC, up to 8 registers can be connected for consolidating store wide reports and/or programming. Each RS-232C port and two optional, additional ports can be connected to one of the following options: direct or modem PC communications with optional polling software; kitchen printer; slip printer; scale; scanner; pole display; coin dispenser; Datatran™ integrated credit; kitchen video; video surveillance.
